

## **Content Federation Services**

1. Content Federation Service connects structured, semi-structured, and unstructured, structured data, from multiple repositories, across multiple networks, to the Content Innovation Cloud.
2. Content Federation Services communicates with repositories through the Content Federation broker that establishes a connection between the repository and Content Federation gateway (hosted by Hyland in Content Innovation Cloud). If the repository is managed by Customer or Customer's third-party vendor, then, upon termination of the Content Innovation Cloud Schedule, Customer will destroy the Content Federation broker installed on such repository and certify in writing to Hyland that Customer has completed such destruction.
